Schedule "U" (Continued)

DETERMINATION OF TIME-OF-USE ENERGY AND DEMAND:

The Company shall install a time-of-use meter to measure the customer's energy consumption and peak load during the time-of-day rating periods. The maximum demand for the rating periods for each month shall be the maximum average load in kilowatts during any fifteen-minute period as indicated by a time-of-use meter. The on-peak kilowatts of billing demand for each month shall be the maximum on-peak demand for such month, but not less than 25 kilowatts.

Power Factor:

For customers with demand in excess of 100 kilowatts, the following power factor adjustment will apply to the energy and demand charges.

The above energy and demand charges are based upon an average monthly power factor of 90%. For each 1% the average power factor is above or below 90%, the monthly energy and demand charges as computed under the above rates shall be decreased or increased, respectively, by 0.15%.

The average monthly power factor will be determined from the readings of a KWh meter and kVarh meter, and will be computed to the nearest whole percent and not exceeding 100% for the purpose of computing the adjustment. The kVarh meter shall be ratcheted to prevent reversal in the event the power factor is leading at any time.

Special Terms and Conditions:

Supply Voltage Delivery:

If the customer takes delivery at the Company's supply line voltage, the demand and energy charges will be decreased as follows:

Transmission voltage supplied without further transformation	4.4%
Distribution voltage supplied without further transformation	1.1%

Metering will normally be at the delivery voltage. When the customer's transformers are adjacent to the delivery point, the customer may elect to be metered at a single point on the secondary side of his transformers where such point is approved by the Company. When the energy is metered on the secondary side of the customer's transformers, the above decreases will be 3.8% and 0.5%, respectively.
