

SIGN UP WITH **HECO** TODAY FOR AN **ENERGYSCOUT**.

**WE'LL DEDUCT \$3
FROM YOUR BILL
EVERY MONTH**

Oahu recently hit new highs in electricity usage and we came close to needing more electricity than was available at the time.

Hawaiian Electric will install a FREE ENERGYSCOUT radio device that can temporarily turn off your water heater during a system emergency. It really does help. In fact, over 5,000 families on Oahu have already signed up for ENERGYSCOUT, and are being rewarded with \$3 bill credits every month. You can too!

How does the program work? HECO will install a FREE ENERGYSCOUT near your water heater. In case of a system emergency, the ENERGYSCOUT will sense the need to reduce energy use and may temporarily turn off the electricity to your water heater. Most people will never notice when the ENERGYSCOUT is working. Even after your water heater is turned off, you can still use the hot water already in your tank.

How long will my water heater be off? The amount of time your water heater would be turned off is determined by how long the system emergency lasts. It is estimated that the power to your water heater would not be interrupted for more than one hour at a time.

How do I save? By participating in the program, you'll earn \$3 every month as a bill credit on your electric bill, even if your water heater never gets turned off. Your bill credit begins with the first complete billing period after your ENERGYSCOUT is installed.

How do I sign-up? Call 94-POWER (947-6937) TODAY.

Can I cancel? You may cancel at any time without any penalty by calling 94-POWER (947-6937).

Some homes are not eligible. Call 94-POWER to find out if your home qualifies. HECO reserves the right to cancel, terminate, modify or suspend the program at its sole discretion.
