

NOTES:

1. Some inverters may not contain internal disconnects.
2. All electrical components must carry UL certification.
3. All work must comply with requirements of HECO Rule 14H and Rule 18.
4. Customer shall label "Customer Generator System Disconnect". The disconnect device shall preferably be installed in the immediate vicinity of the electric meter. With permission of the HECO, the disconnect device may be located at an alternate location which is accessible to HECO on a 24-hour basis.
5. On PV installations ≥ 30 kW, all drawings and documents shall be approved and stamped by a Professional Electrical Engineer registered in the State of Hawaii.
6. A three-line diagram must also be provided for PV installations that are greater than 30 kW.
7. The Contractor shall provide HECO with meter number which is connected to the new PV system. The Contractor shall notify HECO of new PV System before energizing the system and shall coordinate the installation of a NEM meter.

FOR LESS THAN 10 KW SYSTEMS ONLY
